

Class 2

This term's Maths work started with the children working on their understanding of number and bonds within 10 and 20. We used manipulatives and 10s frames to understand that numbers can be built in different ways. This will help us to take the next step of addition and subtraction that will follow.

Our Design Technology project is continuing to progress and the children have now designed and created their prototype puppets using card and other materials. Well done!

Our Geography objective for this half term is the naming and locating of the 5 oceans and 7 continents. Today, we sequenced the world map that had been mixed up and then labelled the oceans and continents.
