

Class 2

This week in Class 2, we've started our work on fractions in Maths. We've explored the link between fractions and multiplication/division. Year 2 children have started their work on unit fractions (numerator is always 1 with different denominators), while Year 1 children have been finding $\frac{1}{2}$ of objects and amounts.

In English, we've been working on using questions in our writing to help progress the narrative. We've focused on 6 question starters and asking questions that are purposeful when used in a story. One of our lessons this week was a hot seating lesson, where children took it in turns pretending to be the character from our story asking questions from the rest of the class.
