

Class 4 Weekly News

This week in Class 4, we have continued our Science unit on Evolution and Inheritance. We have previously learnt all about who Charles Darwin was and the ground breaking work that he carried out in our Topic lessons... and this week was the time to carry out some of our own scientific studies! We simulated the four bird breaks below and their method of feeding through materials such as spoons, pegs, scissors and cocktail sticks and set up an experiment to see which 'beaks' were able to feed on the most variety and quantity of food. We discovered the spoon shaped 'beak' was the most successful and had lots of fun in coming to this conclusion! See below our fabulous Art linked work also.
